ACCOUNTABILITY CERTIFIED SUSTAINABILITY ASSURANCE PRACTITIONER TRAINING

Transparency & Accountability are the foundations of effective sustainability reporting process and can enhance value. Further, assurance determines the way an organisation accounts for its management, performance and reporting on sustainability issues. Robust independent external assurance conducted using professional standards helps to establish the credibility and effectiveness of information reported, and ultimately the performance of the organisation. Knowledge about the standards, therefore, for the companies providing assurance to reporting organisations and vice-a versa is must.

The CII-ITC Centre of Excellence for Sustainable Development (CESD) has been conducting a one of a kind, professional qualification training course, "The Certified Sustainability Assurance Practitioner Training Course", accredited by AccountAbility, UK since 2009.

The Certified Sustainability Assurance Practitioner (CSAP) qualification is the first internationally recognised professional qualification in the field of sustainability assurance. It aims to enable practitioners to develop, validate and communicate their competence in sustainability in a systematic manner thereby making it easier for organisations to identify credible assurance expertise.

Why attend?

- Interactive Learning
- Expert Faculty
